FUEL CELL SYSTEM AND METHOD FOR DETECTING
RUNNING OUT OF FUEL IN FUEL CELL

Examiner: Scully S.N.: 10/564,645 Art Unit: 1795 July 9, 2008

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

 This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

 In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 5-10, drawn to a fuel cell system.

Group II, claims 11-14, drawn to a method for detecting running out of fuel in a fuel cell system.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature is not inventive. JP10-144327, cited in IDS, discloses a fuel cell system provided with a solid polymer type fuel cell and a secondary battery wherein, if electricity generation by the fuel cell is stopped due to some trouble, electricity is supplied by connecting the load to the secondary battery; and a person skilled in the art could easily conceive of an inadequate fuel supply to the fuel cell as the trouble which stops power generation. Further, a person skilled in the art would easily conceive that if the fuel cell was not providing enough power in a decreased power generation state, electricity would be supplied by connecting the load to the secondary battery.

 In addition, as disclosed in JP2001-69614, cited in IDS, displaying a warning when the fuel for a fuel cell or the residual capacity of the secondary battery is low is well known in the art.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the

above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
